

How One Fleet Saved Nearly \$100K With a Toll Management Program

OVERVIEW

A 2000+ vehicle fleet was self-managing **over 130k tolls per year** and searching for a solution to reduce the administrative and cost burden.

BACKGROUND

As with most fleets that self-manage their own tolling, this fleet was struggling to manage multiple issuing authority accounts and devices while ensuring payments were made in a timely manner to avoid added penalties and violations.

CHALLENGE

Current tolling infrastructure is simply not designed to support fleet managers and operators. The complexity of maintaining accounts with multiple tolling authorities for an increasing number of toll roads was placing a heavy cost and administrative burden on this fleet with annual toll management **costs of over \$440k per year**.

SOLUTION

Verra Mobility was able to help this fleet **save nearly \$100k per year** in toll management costs with TollLink, a technology-enabled toll management solution that protects fleet vehicles from fines and pays tolls in electronic toll lanes.

BENEFITS

- Reduction in admin time and cost
- Toll violation elimination
- Personal toll cost reduced by 85%
